

Control Screen Functions With a Single HDMI Cable Connection Using BrightControl CEC Commands.

BrightControl is a new feature that enables a BrightSign players to control the screen that it is driving via High-Definition Multimedia Interface™ (HDMI™) using Consumer Electronics Control (CEC) commands. With BrightControl, major screen states such as power on/off, volume up/down/on/off, input select, user-defined commands and all other standard CEC controls available can be conveniently managed without user intervention.

In the past, screen control commands were sent through an RS-232 cable/connection for power, volume, etc. controls. But now with BrightControl, users can eliminate this additional connection and do all of the same command controls using the already connected HDMI cable. This not only lowers the cost of the digital signage solution, it makes it much faster and easier to install/deploy.

Benefits

- Control screen functions with a single HDMI cable connection between BrightSign and the screen
- Save on costs and installation time with a single connection solution
- Supports all standard CEC commands such as:
 - power on/off
 - volume levels
 - input selection
- Built-in as standard feature on all BrightSign models including:
 - BrightSign HD110, HD210, HD210w, HD410, HD810, HD1010, HD1010w
