ONELAN
Content Management System for BrightSign Players

ONELAN has developed a software player that can be installed onto BrightSign hardware and controlled from ONELAN's Content Management System 3.0 (CMS) to enable enterprise capabilities on BrightSign players. This gives customers even more flexibility to select the right player and display for their budget and needs.

The software gives the BrightSign player access to a CMS, engineered for large networks of players across multiple locations. The ONELAN CMS includes content management and scheduling tools capable of delivering highly complex content strategies globally.
