**BrightSign®**

FREE REMOTE PLAYER MONITORING AND MANAGEMENT

Take charge of BrightSign players effortlessly with Control Cloud, our complimentary remote device monitoring and management solution. Whether you have one screen or thousands, Control Cloud empowers you to oversee your BrightSign players anytime, anywhere. Streamline deployments, review real-time player health, and remotely control players to greatly reduce the need for costly on-site visits. Access your player network in real-time with Control Cloud and seamlessly integrate it with your preferred partner CMS for a synergistic solution that combines the best of both worlds.

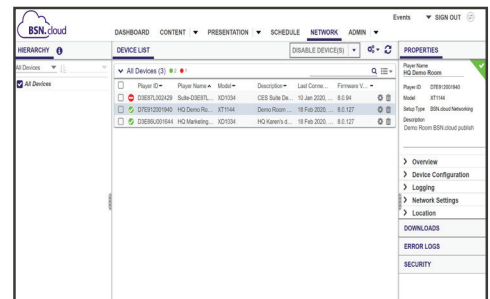

Streamlined Setup

- Instantly sign up for a free Control Cloud subscription online
- Activate your player following the on-screen instructions
- Easily provision single, multi or mass sets of players
- Customize player settings with options including WPA Enterprise/802.1x, multi-network port priorities & redundancy
- Streamline player setup with a single process that includes your choice of CMS

Real time Player Control

- View real time connected player health from any location
- Access the real time diagnostic web server to monitor, maintain & control players
- Initiate remote snapshots on demand to see what's playing on-screen
- View the player's SD card health remotely
- Analyze the player network health report for the past 24-hours of operation
- Make real time edits to player properties, network settings & interface priority
- Discover & configure added network interfaces automatically
- Automatically rollback to a valid network configuration

Your Choice of CMS

Control Cloud provides remote device management alongside your choice of CMS to give you unmatched flexibility and complete control over your player network. Monitor and control your BrightSign player network anytime, anywhere using Control Cloud, and use your choice of CMS to handle the rest. BrightSign players seamlessly integrate with a huge global network of top CMS partners, many of which have integrated Control Cloud tools directly into their solutions for seamless deployments from one screen to thousands.
