BrightSign®

Device Management

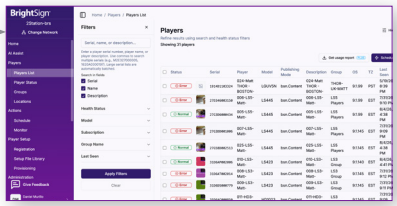

BrightSign® CONTROL

BrightSign Control is a free cloud-based device management service included with every BrightSign player. Accelerate time to deployment with out-of-the-box capabilities to configure, monitor, and control players without requiring additional software or subscriptions, all via an easy-to-use interface. BrightSign Control seamlessly integrates with your preferred CMS for flexible content and management workflows.

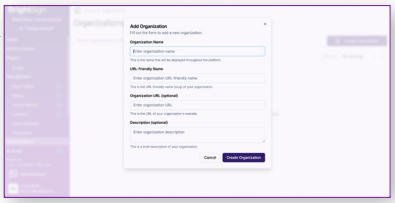

Setup & Provisioning

Set up and provision any BrightSign player at no additional cost. Configure players for content publishing and connect to partner CMS solutions, ensuring a fast, consistent deployment experience.

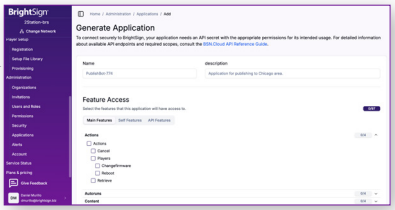

Remote Monitoring & Control

Reduce costly visits by ensuring the health of any player across any location. Run diagnostics, reboot devices, capture snapshots, and issue commands.

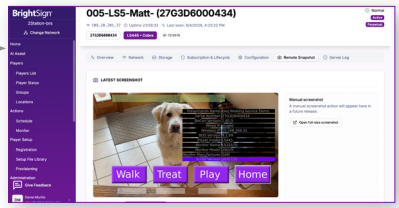

Set up Organizations

Manage administrators, Single Sign-On (SSO), and associated domains. Invite users to verify domain ownership, and set up SSO.

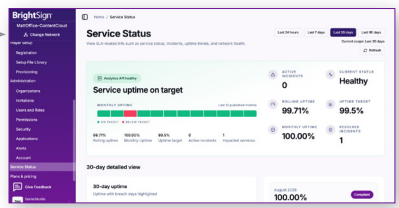

Configure Applications

Access BrightSign APIs by generating client IDs and secrets for programmatic access. Choose application-specific scopes to minimize risk, reduce attack surfaces, and prevent unintended changes.

Gain Insights on Content Playback

Ensure your devices are playing the right content by easily viewing snapshots of what is being played on any player, at any time.

Service Health

Gain immediate information, as well as historical data, on the health of BrightSign cloud services.

SLA figures are taken from rolling 12-month SLA calculations based on incident.io
